DETAILED ACTION

Claims 1-20 are pending and subject to restriction.

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, drawn to a solution of α -keratose, classified in class 435, subclass 1.1.
- II. Claims 9-14, drawn to a first method, a method of intravenously administering a solution of α -keratose, classified in class 424, subclass 543.
- III. Claims 15-16, drawn to a second method, a method of perusing an isolated mammalian organ with a solution of α -keratose, classified in class 435, subclass 1.2.
- IV. Claims 17-18, drawn to a third method, a method of growing mammalian cells comprising culturing in fetal- calf, serum-free medium comprising α -keratose, classified in class 435, subclass 325.
- V. Claims 19-20, drawn to a fourth method, a method of removing pathogens from blood comprising infusing a water soluble oncotic agent, classified in class ?, subclass ? depending on oncotic agent.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II-IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, applicants' multiple processes of use provide evidence that the product may be used in materially different processes of use.

Art Unit: 1651

The processes are distinct from one another because they recite different and distinct steps which lead to different and distinct products.

The several inventions listed above are independent and distinct from one another as they have acquired a separate status in the art and require independent searches, particularly with regard to the literature searches. Clearly, a reference which would anticipate one of the above groups would not necessarily anticipate or even make obvious any of the others.

An undue burden would ensue from the examination of multiple methods which have distinct steps and end points. Burden lies not only in the search of US Patents, but in the search for literature and foreign patents and examination of the claim language and specification for compliance with the statutes concerning new matter, distinctness and scope of enablement.

Because these inventions are distinct for the reasons given above restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
